

# Ready, Scan, Go: The future of POCUS workflow from the Venue Family

# Look closer and discover POCUS efficiency with every step

Available only in GE HealthCare's Venue™ Family of ultrasound products, Ready, Scan, Go™ represents a new frontier in point-of-care ultrasound technology, freeing clinicians from the burdens and barriers of antiquated practices.

- Seamless and hassle-free login allows you to focus on patient engagement
- Simplified workflow through single-scan patient information access
- State-of-the-art security and flexibility to protect patient data and optimize care

The Venue Family

Experience a more secure, streamlined workflow with world-class ultrasound. **No limitations.**

## Patients not process

Welcome to the next generation of point-of-care ultrasound. The Venue Family is the only POCUS platform with **Ready, Scan, Go**, a time-saving workflow solution, including user badge scanning (Imprivata®) and patient wristband scanning (barcode). Imprivata Medical Device Access helps organizations optimize their use of interconnected medical devices to improve the delivery of care, strengthen security, and maintain compliance requirements. It also improves efficiency for clinicians and gives them more time to focus on patient care.

**Ready, Scan, Go** lets clinicians quickly access systems and automatically access patient information. It is equipped with two key functions to enhance workflow: Imprivata RFID badge reader and patient barcode scanner.

-  **Easy Logins**—Focus on patient care instead of time-consuming and distracting login processes.
-  **No More Ghost Scans**—Venue Family automatically keeps tabs on both clinicians and patients to avoid images with missing information. This leads to more reliable reporting, more accurate billing, and optimal care.
-  **Better Security and Control**—Imprivata allows next-level flexibility to protect patient information.
-  **Streamlined Workflow**—A smarter, more efficient process helps clinicians save precious time\* and effort to care for patients.

## Cut time, not corners

Doctors and clinicians using POCUS ultrasound often don't have a moment to spare. **Ready, Scan, Go** is enabled with Imprivata to support a fast and intuitive “badging in and out” process to which most clinicians and doctors are already accustomed. Sign in with an RFID badge reader for simple, fast, and secure login. Set security levels based on users' needs and enable additional security measures like two-factor authentication to keep patient data secure.

### Security, Efficiency, and Productivity

Enable authentication to access medical devices and patient information.

Safeguard patient health information and meet compliance requirements by improving visibility into all user interactions with patient records on medical devices. All exams are documented correctly and easily with your name.

Replace usernames and passwords with fast, streamlined authentication with the tap of a badge.

Eliminate manual data entry, saving precious time and effort to care for patients.

Secure network-connected devices and enforce stronger regulation for password complexity, session time-outs, and auto-lock functionality.

Auditable chain of trust gives your organization better visibility into how, when, and where clinicians access and interact with patient health information.

Visit [gehealthcare.com/readyscango](https://gehealthcare.com/readyscango) to learn more about how you can start integrating it into your patients' care.

## It's all in the wrist

**Ready, Scan, Go** makes importing patient information intuitive, easy, and secure with wristband barcode scanning. One quick scan automatically populates patients' most current and accurate healthcare data.

Reduce delays and expedite patient onboarding.

Meet compliance requirements by improving visibility into all user interactions with patient records on medical devices.

Eliminate user error from manual entry.

Populate patient information right from the EMR onto the machine to scan without having to create a separate order.

---

**37%** time-savings by implementing barcode scanning of patient bracelet information vs. manual entry\*

## World-class ultrasound imaging is just the start

The GE HealthCare Venue Family with Ready, Scan, Go is proud to offer streamlined ultrasound reporting with ViewPoint 6. It's the final piece of the puzzle for improving POCUS workflow. ViewPoint 6 is a seamless, fast conduit to translate the data gathered on the Venue Family platform into accurate reporting required for patient charts and financial reimbursement.

**Streamlined Workflows**—Simplify workflow and minimize the manual steps that slow down an exam.

**Easy Reporting**—Save time by starting your reporting directly on your Venue ultrasound scanners. Exam findings and images are automatically transferred to ViewPoint 6, and from there to your EMR and PACS.

**Encounter-based Imaging Workflow**—ViewPoint 6 can create a worklist for the Venue system without orders. This is enabled through integration to the EMR.

**Convenience and Compliance**—ViewPoint 6 is aligned with medical guidelines and allows for QA documentation, while keeping track of the type and number of every exam each healthcare provider performs, facilitating ultrasound Quality Assurance (QA) and credentialing.

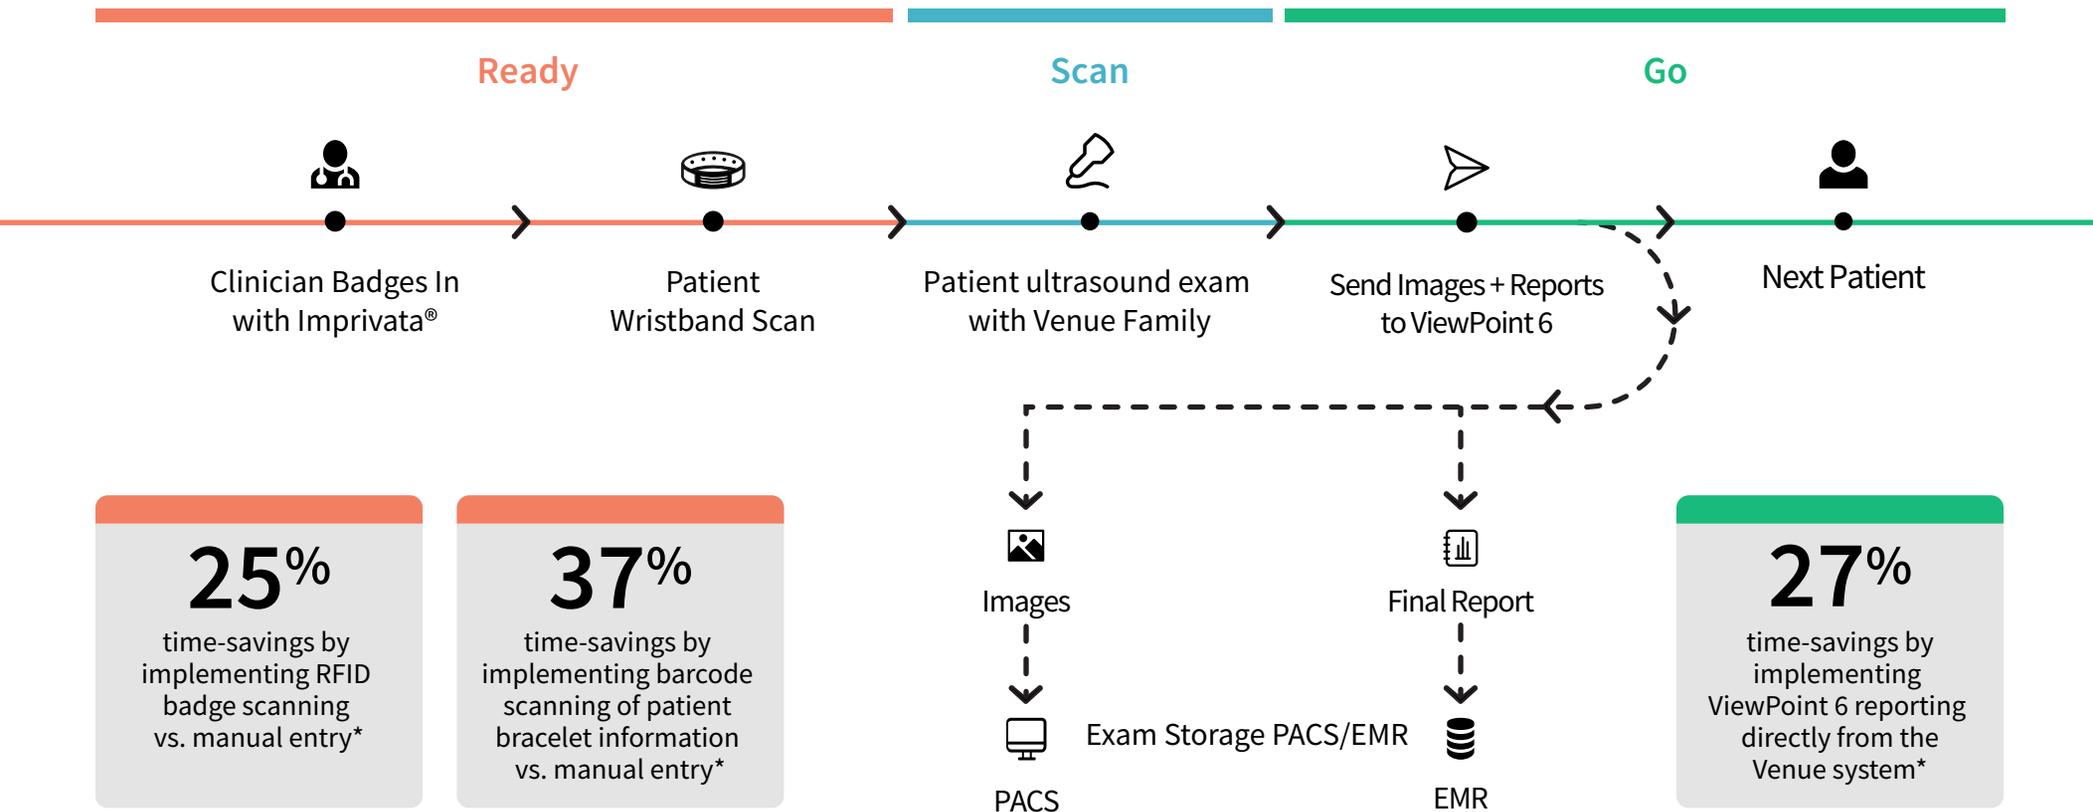

**Direct Reporting**—Physicians can enter a report directly into the system with no need to chart it separately in EMRs. This saves time and increases both efficiency and accuracy.

# Accelerate ultrasound workflows at the point of care

A faster, more accurate, and more secure image is as easy as “Ready, Scan, Go”

#### Patients Ultrasound Exam

- Scan clinician ID badge
- Scan patient wristband
- Scan patient
- Populate POCUS report details on Venue
- Send Study to ViewPoint 6

#### ViewPoint 6

- On ViewPoint 6, finalize report
- ViewPoint 6 sends the report to EMR and image to PACS
- Perform QA

## Look closer for instant access to patient care

You and your patients deserve the most intuitive, secure, and forward-thinking ultrasound solutions. **Ready, Scan, Go** offers the latest and most cutting-edge workflow to help you focus on your patients, not on the logistics of handling your equipment.
