ViewPoint™ 6
25 years of experience in medical reporting

Designed for Ob/Gyn Professionals

When you have a busy practice and you need to thoroughly document and archive all of your exams, ViewPoint 6 can help make your workflow easier, faster, and simpler. ViewPoint 6 offers customizable solutions for image management and documentation of your ob/gyn exams. Ultrasound images from different sources are transferred automatically and displayed on one screen together with structured findings. The integrated 4D View Software is accessible directly from the ViewPoint 6 Image gallery to analyze GE Voluson studies.

Comprehensive Connections

ViewPoint 6 has solutions of all sizes, from private offices up to enterprise level institutions. It easily integrates with many multi-vendor ultrasound machines, IT solutions, and hospital-wide HIS, RIS, PACS, and EMR systems to offer comprehensive connectivity. Let ViewPoint 6 be your standalone PACS and EMR system in one easy-to-use-solution.

Streamlined Workflow

From scheduling your patient appointments, performing your exam to final storage, ViewPoint 6 fits into your workflow as a scalable solution designed to simplify your daily routine. A single click allows you to archive all exam information and send a report to an HIS/EMR or a colleague. ViewPoint 6 supports your ultrasound workflow, helping enhance efficiency and data quality.

- Reduce manual data entry with automated measurement transfer
- Apply Quick Report templates for efficient reporting
- Switch between the form view and the preview of the printable report with only one click
- Add images easily to complete your report
- Customize forms, fields, and reports

Advanced Image Review

A clearly laid out image viewer helps you manage all the images you send from your ultrasound systems in one place, whether you send 5 or 500 images each day. The ViewPoint 6 image viewer allows you to:

- Easily access and compare images from a past study
- Utilize advanced image tools to aid in diagnosis:
  - Auto-play clips
  - Measure and annotate
  - Rearrange images
  - Post-process volumes using the integrated 4D View program
  - Store measurements

Professional Reporting Simplified

Your ultrasound reports can include every-thing from images, graphs and measurements to results and recommendations. ViewPoint 6 can help you create comprehensive and easy to read reports in less time.

The OB/GYN reporting module includes:

- Medical History
- Early Pregnancy
- 1st Trimester Ultrasound including FMF Risk Assessment*
- 2nd/3rd Trimester Ultrasound
- Fetal Echocardiography
- Growth Scan
- Fetal Wellbeing including Biophysical Profile
- Pelvic Ultrasound
- Consultation Letter
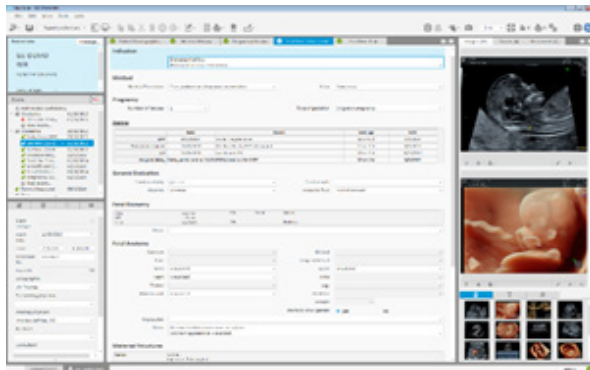

Create a clean, professional report with measurements, graphs, findings and images. Easily switch between the form view to enter your findings and the preview of the printable report.

See Beyond the Obvious

The analytics module in ViewPoint 6 can help put all that data at your fingertips to look for trends, diagnostic details and tagged images. It gives you the power to create a query for any information in the database and export to other applications, like Microsoft Excel™.

The ViewPoint 6 analytics tool can help you with:

- *Quality control*
- *Accreditation*
- *Research*

"We work almost exclusively with ViewPoint 6 at the women's clinic in Neu-Ulm. It is one of the most advanced systems on the market. The automated processes improve our workflow, which saves us a lot of time."

Priv. Doz. Dr. med. Dominic Varga

Chief Physician of the Obstetrics and Gynecology Department; Danube Hospital, Neu-Ulm, Germany
